

CODAN HF/VHF Crosspatch

CODAN HF/VHF Repeater Crosspatch

Codan's 3031 HF Crosspatch is a practical, effective and affordable solution for extending reach of a conventional VHF/UHF network beyond the horizon using Codan's HF SSB transceivers. The 3031 also enables organisations to extend existing Codan HF networks with VHF/UHF handheld radios that are carried by field operators when away from base or their vehicle.
